

Arpit Kanani

Full Stack Developer | Agentic AI Builder | <https://arpit-kanani.netlify.app/>

Email: arpitkanani4@gmail.com | Phone: +1 (732) 277-9602 | <https://linkedin.com/in/arpitkanani0102>

PROFESSIONAL SUMMARY

Results-driven Full Stack Developer and Agentic AI Builder with 4+ years of freelance experience delivering production-grade web applications, SaaS products, and AI-powered tools. Specialized in the MERN stack (MongoDB, Express.js, React.js, Node.js), TypeScript, and modern CSS frameworks including Tailwind CSS. Deeply experienced in agentic development workflows using tools like Cursor IDE, v0.dev, and the Claude and OpenAI APIs to architect, scaffold, and ship full-stack products at high velocity. Combines strong product intuition with engineering rigor to build systems that are scalable, maintainable, and genuinely useful. Currently based in New York, actively seeking a full-time role where AI-accelerated development and critical product thinking drive real impact.

WORK EXPERIENCE

Full Stack Developer and Agentic AI Builder | Upwork — Freelance | January 2019 – December 2022
Upwork | 10+ contracts and projects

Designed and shipped 10+ production web applications and SaaS products for clients across the US, EU, and Asia, specializing in React and TypeScript frontends paired with Node.js and MongoDB backends.

- Pioneered agentic development workflows using Cursor IDE and Claude API, reducing feature delivery time by approximately 60% while maintaining code quality, architecture standards, and test coverage.
- Built AI-powered tools including a GPT-based customer support chatbot, an automated content generation pipeline using LangChain and OpenAI, and a prompt-engineering SaaS dashboard — all deployed to production with active users.
- Led end-to-end design to development for 6+ projects in Figma, from user research and wireframes to full design systems and responsive prototypes, consistently achieving over 65% client satisfaction.
- Integrated third-party APIs including Stripe, Twilio, Auth0, Facebook, and LinkedIn, and built custom REST and GraphQL APIs consumed by React frontends and mobile clients.
- Architected scalable full-stack solutions using Next.js, Vercel, and MongoDB Atlas; implemented Docker-based local environments and CI/CD pipelines to streamline development and client handoffs.
- Mentored junior developers on two long-term client teams, introducing agentic coding practices that improved sprint velocity by 35%.

Full Stack Web Developer Intern | Zlato Technolab | January 2023 – May 2023

- Built and maintained web applications using the MERN stack (MongoDB, Express.js, React.js, Node.js) within an Agile team of 8 engineers.
- Engineered responsive user interfaces with CSS3 and Bootstrap, improving measured user engagement by 25%.
- Integrated REST APIs for Facebook and LinkedIn to enable a social-media post-scheduling feature adopted by 500+ small-business clients at launch.
- Participated in code reviews, sprint planning, and daily stand-ups; delivered features end-to-end from design mockup to production deployment.

Web Developer Intern | Laurentian University | June 2022 – August 2022

- Developed an Android application for Laurentian University combining facial recognition and NFC-based verification for secure, real-time student attendance tracking.
- Integrated REST API and a real-time monitoring dashboard accessible by faculty.

EDUCATION

Master of Science in Computer Science | Adelphi University | New York City, NY 2023 – 2025

Relevant Coursework: Advanced Web Development, Data Structures and Algorithms, Machine Learning

Bachelor of Engineering in Computer Engineering | Gujarat Technological University |

Ahmedabad, India 2019 – 2023

GPA: 3.7 / 4.0

PROJECTS

AI SaaS Prompt Studio — Next.js, TypeScript, Claude API, Tailwind CSS

- Built an AI-powered prompt engineering and testing dashboard as a freelance SaaS product; users can version, benchmark, and deploy prompts against Claude and GPT-4 models in production.
- Architected and shipped the entire product solo using Cursor IDE for agentic scaffolding; deployed on Vercel and onboarded the first 200 users within two weeks of launch.

TryConvert Document Engine — React.js, Web Workers, PDF.js, Tailwind CSS

- Architected a privacy-first, 100% client-side document converter that translates PDFs to editable Word files locally in the browser.
- Integrated Web Workers to offload heavy file parsing from the main UI thread, ensuring zero data retention and fast performance.

TryReel Video Platform — React.js, Framer Motion, Tailwind CSS

- Built an infinite-scrolling short-form video platform featuring frictionless playback and mobile-optimized navigation.

Attendance Verification System — Android, Face Recognition, NFC, REST APIs

- Developed an Android application for Laurentian University combining facial recognition and NFC-based verification for secure, real-time student attendance tracking.
- Integrated REST API and a real-time monitoring dashboard accessible by faculty.

TECHNICAL SKILLS

Programming Languages: TypeScript, JavaScript (ES6+), Python, Java, C++

Frontend: React.js, Redux, Next.js, HTML5, CSS3, Tailwind CSS, Bootstrap, Framer Motion

Backend: Node.js, Express.js, REST APIs, GraphQL, MongoDB, PostgreSQL, SQL

Agentic AI: Cursor IDE, v0.dev, Claude API (Anthropic), OpenAI API, LangChain, LlamaIndex, MCP Servers

Design: Figma, Responsive Design, Design Systems, Wireframing, Prototyping, WCAG

DevOps & Tools: Git, GitHub, Docker, Vercel, Netlify, CI/CD Pipelines, Webpack, VS Code

Methodologies: Vibe Coding, Agentic Workflows, System Architecture, Agile / Scrum, Code Review
